Coiled tubing tools pdf

I'm not robot!

Our complete range of downhole tools is listed below. Can't find what you're looking for? Please contact us, and we will be happy to help you. Download the full product catalogue Used for stabbing coil over the goose neck and through the injector or as a barrier on the bottom of coiled tubing hanging string.View Product Provides a means of closing off back pressure from the Coil Tubing within the well. Provides a pressure tight barrier in one direction but enables flow in the opposite direction.View Product Designed to centralize the BHA inside tubing or casing after it has passed through a restricted ID. Allows passage of activation devices.View Product Shorter than most jars on the market without compromising function. Can be modified to impact only upwards or downwards if required.View Product Patented tool increases efficiency during abrasive perforating, especially multi-stage fracturing operations. Flow can be selectively diverted from the straight-through path of the BHA to the abrasive jetting housing and back to the straight-through path again. View Product Used to run a ball through the coil to check for ID measurements. It allows the ball to be caught so the fluid can bypass the ball.View Product Our fluted centralizers give the bottom hole assembly stand off from the casing wall to prevent wear from the tool drag.View Product We offer a variety of frac tool rentals that can be used in different configurations for a variety of different size casings, up to a depth of 1500 meters.View Product We provide a range of grapple connectors for a wide range of applications. The Knuckle design feature allows for flexibility when needing to pass through the gooseneck and injector without having to disconnect.View Product Latches standard internal GS profiles such as locks, disconnects and various other completion tools. The latching mechanism is a robust dog/core design which releases positively from the internal fish neck when a hydraulic differential is applied to the tool. View Product Enables the operator to drop a ball and pressure up to disengage the tool from the remaining stuck tool string while controlling flow back to surface through coil.View Product Manipulates fluids, gases or mixtures to produce dynamic turbulent flow while conducting cleanout operations to remove debris. Enhances the effect of water and chemicals.View Product Separates itself from the remainder of a stuck tool string when jarring and pulling is insufficient to release immobilized tools.View Product Retrieves lost or broken tools and tubing from the wellbore. The latching mechanism is a robust/slip design which releases positively from the stuck fish when a hydraulic differential is applied to the tool. View Product Attaches the BHA to the end of the coil.View Product This tool was developed to safely deploy and retrieve coil tubing and jointed pipe bottom hole assemblies.View Product Provides additional flexibility to the tool string and allows tools to be run in restricted or highly deviated wells.View Product Mechanically rotates while setting down weight. Can be used for rotating and locating a fish within the well bore and or to avoid liners, profile ledges and other obstructions with the well.View Product From completion nipples to clamps, we have all the downhole tools you require in a variety of sizes for your operations.View Product Compact tool which incorporates Twin Flapper Check Valve Assembly, Hydraulic Disconnect, and a Tri-Circulating Sub as well as a torque through facility and is available with or without standard GS fishing profile.View Product The Coil Solutions NO-GO is installed at the top of the Bottom Hole Assembly to ensure string tagging on the stripper when removing service tools from the well bore.View Product Provides a means of closing off back pressure from the Coil Tubing within the well. Provides a pressure tight barrier in one direction but enables flow in the opposite direction.View Product Any number of desired nipples can be placed in the production string. This gives the ability to offer unlimited number of positions for setting and locking surface controls.View Product Accommodates high tensile connector and Bottom Hole Assembly pull tests. Can be adapted to all external connectors.View Product Allows the tool string to be assembled in two manageable sections and can be connected over the wellhead without turning the Bottom Hole Assembly. View Product This is used when no internal profile is available in fishing situations where inside tool is the only option.View Product Attaches two pieces off coil tubing together or attaches the BHA at the end of the coil tubing by internally crimping the coil to match the crimping grooves provided. View Product Delivers high jet power fluid to the tubing/casing walls for scale removal and other obstructions within the well.View Product Our rugged Slide Hammer tool has been built to take on all jobs requiring hammering action while installing or uninstalling coil tubing tools.View Product Attached the BHA to the end of the coil. The slips ensure that the axial load is transferred onto the coil. Comprised of a Top Sub, a Slip, Brass Ring and a Bottom Sub with desired Connection. View Product Attaches the BHA to the end of the coil. The slips ensure that the axial load is transferred onto the coil. Comprised of a Top Sub, a Slip, Brass Ring and a Bottom Sub with desired connection. View Product Our range of straight bars will accommodate those service jobs that need a straight line service string.View Product Versatile and Rugged Pull/Pressure Test Sub to check for static leaks on tool before entering the well.View Product Attaches the BHA at the end of the coil tubing by internally crimping the coil to match the crimping grooves provided. View Product Missing product excerpt.View Product Provides additional flexibility to the tool string and allow tools to be run in restricted or highly deviated wells.View Product Cleans the inside of well tubulars, allowing the removal of residue such as salt, sand, mud, rust and scale.View Product Our complete range of downhole tools is listed below.
